CAREER OBJECTIVE

Motivated Electronics and Communication Engineering graduate with strong foundations in Python, Data Structures, OOP, SQL, Flask, and Software Development. Experienced in developing web-based and machine learning applications through academic projects and internships. Seeking a Python Developer role to apply problem-solving and software development skills.

EDUCATION

Narayana Engineering College (Nellore, Andhra Pradesh) B.Tech (Oct 2022 – May 2026)
CGPA: 9.3 / 10
Electronics And Communication

Narayana Junior College (Nellore, Andhra Pradesh) Intermediate (2020 – 2022)
Percentage :95.1

Sri Saradha E.M High School (Nellore, Andhra Pradesh) SSC (2019 – 2020)
CGPA:9.8/10

SKILLS

- **Programming Languages:** Python, C
- **Core Computer Science:** Data Structures, Object-Oriented Programming (OOP), DBMS, SDLC
- **Machine Learning:** CNN, YOLO, Image Processing, Model Training & Validation
- **Tools:** VS Code, GT Studio, Jupyter Notebook
- **Database Technologies:** SQL
- **Software Development:** Debugging, Software Testing, Error Handling, Problem Solving

INTERNSHIP

- **Data Annotation Associate** - Brown Edge Technology Jan 2026 – May
Processed and annotated LiDAR point cloud, image, and video datasets using GT Studio to support AI/ML model development.
Performed data validation and quality assurance checks to ensure dataset accuracy, consistency, and compliance with project requirements.
Identified, analyzed, and resolved data inconsistencies, edge cases, and annotation errors through systematic troubleshooting.
Managed large-scale structured datasets while maintaining high standards of data quality and operational efficiency.
Documented annotation guidelines, validation processes, and issue resolutions to ensure consistency across datasets.

PROJECTS

- **Plant Disease Detection System:** Developed a web-based plant disease detection application using Python and Flask with image upload and live camera detection capabilities. Designed a scalable backend using OOP principles, integrated machine learning models for disease prediction, managed database operations, and performed testing and debugging to improve system reliability.
- **Automatic Plant Watering System:** Developed an automated irrigation system that monitors soil moisture levels and controls water pumps based on predefined thresholds. Implemented Python-based automation logic for real-time sensor data processing and decision-making. Integrated hardware components including NodeMCU, soil moisture sensors, and relay modules for seamless operation.

ACHIEVEMENTS

- **Competitive Programming:** Achieved a 1000-level rating tier on CodeChef, consistently solving algorithmic, logic-based, and array-driven programming challenges using Python and C.
- **Academic Excellence:** Maintained a consistent 9.3 / 10 CGPA throughout B.Tech with zero standing arrears, placing in the top tier of the department.
- **Technical Consistency:** Completed numerous practical coding challenges, demonstrating active problem-solving and foundational debugging skills.
